

# ATLAS RECYCLING

## RECYCLED CONCRETE

SUPERIOR QUALITY AT ALL GRADES

## THE ATLAS DIFFERENCE: RESPONSIBLE RECYCLING.

Concrete recycling is the smart, cost-efficient and environmentally friendly way to reuse aggregate left behind when concrete structures are demolished. Instead of taking up space in landfills, concrete fragments now can be crushed into rubble, which is then sifted, cleaned and efficiently sized into a range of high-quality, standards-approved, competitively priced aggregate materials for a variety of uses. And, Atlas Recycling is the standard-setter in this field, in terms of specification, processing and 'Green Star' environmental building code

compliance – demonstrating a commitment to 'doing it right' which is reflected into the quality and integrity of our products.

Atlas Recycling's concrete re-processing facilities – designed and built by the company's own hands-on experts – fully comply with, or exceed, local authority regulations concerning dust control, noise mitigation, water discharge volume and quality and nuisance.

**RESPONSIBLE RECYCLING: NOBODY DOES IT BETTER.**

### BIG. SMALL. WE CRUSH IT ALL

If it's made of concrete, we can crush it, clean it, size it and give it new purpose. From prestressed bridges to ferro-cement boats, power poles to patio pads, tilt panels to tiles, drainage pipes to driveway slabs, bricks and blocks, Atlas Recycling accepts demolition material from local authorities, civil engineering contractors, builders, demolition specialists, home renovators and even DIY homeowners.

Our unique, custom-designed recycling facilities efficiently reduce this waste material to rubble, filter out wooden, plastic, metal and other unwanted elements, then screen-size the resulting aggregate to produce various grades and types of products that are 75% natural stone.

### BRING IT

Atlas Recycling drop-off yards can safely, quickly and efficiently accommodate any size or type of delivery vehicle, from earth-moving behemoths to compact car trailers. Automated washing facilities – using recycled water - are on-hand to rapidly remove dust and leftover rubble from visiting vehicles.

Our main site is located within easy reach of the North-South and East-West motorways. We also serve West Auckland and the Hibiscus Coast/Rodney areas through our Kumeu and Silverdale yards.

### OUR PRODUCTS & THEIR USES

Re-use applications for Atlas Recycling products are constantly expanding. The current range features Crushed Concrete aggregates (containing some sand/cement fines) in four grades and screened clean Drainage Concrete (free of fines) in three grades.

#### CRUSHED CONCRETE

Crushed Concrete is used primarily on sites where a granular fill is required for site development, but can also be used as a base material for mixing new concrete for footpaths, etc... Its benefits include easier compaction, competitive pricing against quarried stone, and high performance.

- **Crushed 8** - Nominal 8mm all-in with fines; suitable for bedding pipes or under pavers (Gap8 equivalent)
- **Crushed 20** - Nominal 20mm all-in with fines; suitable for under footpaths or levelling under driveways (Gap20 equivalent)
- **Crushed 40** - Nominal 40mm all-in with fines; popular for use under floor slabs, driveways, carparks and hardstand areas (Gap40 equivalent)
- **Crushed 65** - Nominal 65mm all-in with fines; heavy-grade material for subdivisions and commercial applications (Gap65 equivalent).

#### DRAINAGE CONCRETE

Drainage Concrete is crushed concrete from which all fines have been screened out, leaving the stone chips loose and ideal for drainage applications.

- **Drainage 25/8** – Screened clean 25/8 size (free of fines)
- **Drainage 40** – Screened clean 40/20 size (free of fines)
- **Drainage 65** – Screened clean 65/40 size (free of fines)

These products are available in bulk from our conveniently located yards in Albany, Kumeu, Silverdale and Wiri. We sell and deliver by the cubic metre, using truck-and-trailer rigs, six-wheelers and 4x4 four-wheelers, depending on location and site accessibility.
